

Project – 1 Water Mains Construction

Council has recently completed work to replace 3,200 metres of old PVC water mains on Melbergen and Yoolaroi sections with 180 mm HDPE pipes. This work was tendered and completed at a cost of approximately \$200,000.

The Council have had numerous breaks on those sections, which contributed to interruptions of water supply, higher operation and maintenance costs.

Council expects with the replacement of old PVC pipes with high-quality HDPE pipes, a number of breaks in those sections would be reduced dramatically and will increase system efficiency with a continuous supply of water to their customers.
